Amendments to the Claims

The listing of claims will replace all prior versions, and listings of claims in the application.

Claims 1-25 previously cancelled.

. . .

26. (New) A method of manufacturing an electrolytic capacitor comprising the steps:

forming a polymeric housing definir g a chamber and having an opening providing access to the chamber;

stacking a plurality of flat conductive layers to generate a stack;

inserting the stack into the chambe;

extending an electrically conductive feedthrough from the stack to a position outside of the chamber by way of the opening; and

sealing the opening about the feed hrough.

- 27. (New) The method of claim 26 wl erein the step of sealing includes thermally affixing together portions of the housing with the feedthrough trapped there between.
- 28. (New) The method of claim 26 wherein the step of forming the housing includes vacuum forming the housing.
- 29. (New) The method of claim 26 w rerein the step of forming the housing includes heating a sheet of polymeric material, and conforming it to a tool.
- 30. (New) The method of claim 29 wherein the tool has a shape based on the shape of the stack.
- 31. (New) The method of claim 26 ir cluding providing a sleeve about the feedthrough, wherein the sleeve material is different from the conductive feedthrough material.
- 32. (New) The method of claim 31 wherein the sleeve has an elongated cross section.
- 33. (New) The method of claim 32 wherein the sleeve cross section terminates at acute vertexes, such that the housing material may readily seal about the sleeve without voids.
- 34. (New) The method of claim 31 v herein the sleeve is an elastomeric material.
- 35. (New) The method of claim 26 wherein the housing is formed of high density polyethylene.
- (New) The method of claim 26 including inserting the stack into the housing by way of the opening.
- 37. (New) The method of claim 26 v herein the step of sealing comprises welding opposite sides of the housing together along a single line.

Patent VT0276-US2

- 38. (New) The method of claim 26 wherein the step of sealing includes generating and maintaining compression of the feedthrough to provide a fluid seal.
- 39. (New) The method of claim 26 wherein the step of sealing includes connecting a header to the housing to enclose the opening.
- 40. (New) The method of claim 39 including capturing the feedthrough between the housing and the header.
- 41. (New) The method of claim 26 including sealing a vent element into the opening.
- 42. (New) The method of claim 26 whe ein sealing includes a first sealing operation in which an aperture to the chamber is maintained, and including the s eps of filling the chamber with electrolyte by way of the aperture, and sealing the aperture.
